International Economics

B.Sc. International Business and Politics

Fall 2010 (preliminary version)

Lecturer: Paul Deng, pdd.eco@cbs.dk

Assistant Professor of Economics Department of Economics, CBS

Office Hour: Open-door policy, or appointment by email

Office is located at Porcelænshaven 16A, 3.55.

Lecture Schedule: 2 ½ hours for each meeting, twice a week, from week 36

to week 41.

Credits: 7.5 ECTS

Literature: Krugman and Obstfeld: International Economics: Theory

and Policy (Pearson Addison, Wesley and Longman, 8th edition; previous editions, published after 2000, are also

fine).

Additional reading materials, including lecture notes, will

be posted on my teaching website at:

http://www.pauldeng.com/teaching/intecon/index.html

Regular announcements, including course syllabus, can be

found at e-cbs.dk.

Teaching Methods: Lectures

Purposes: To enable students to understand and explain why

countries trade with each other, patterns of trade flows, basic trade theories, and trade policies; Also to understand and explain balance of payments, how exchange rates are determined, exchange rate regimes, and international

macro policies.

Content: This course offers introduction to international economics.

In the first part of the course, we study International Trade theories that focus on the behavior of the "real" economic variables; In the second part of the course, we study International Finance theories with addition of "monetary" variables. We also develop a theoretical framework that allows us to understand the interaction between "monetary" and "real" variables.

Learning objectives:

After the course students should be able to:

- Explain basic terminology from International Economics (e.g. "comparative advantage", "factor abundance", "factor intensity" etc.) in a comprehensive and intuitive way.
- Describe and rationalize the main assumptions behind trade models such as Ricardian model, Hechscher-Ohlin model, and imperfect competition model.
- Perform policy experiments (e.g. the impact of introducing tariffs).
- Illustrate diagrammatically these models and perform analysis of the pattern of trade, gains of trade and effect on the income distribution from trade.
- Solve algebraically simple trade models (e.g. imperfect competition models.) in order to determine the equilibrium economic variables (e.g. price, average costs, quantity, profit, etc.).
- Describe and rationalize the main assumptions behind the main models of Open-Economy Macroeconomics, such as models based on PPP, the uncovered interest parity, etc. Illustrate diagrammatically these models, perform policy experiments (like changing the Money Supply) and interpret verbally what happens when equilibrium changes from one to another.

Examination date: October 22, 2010.

Examination form: 4-hour open-book exam

Assessment Criteria: Graded by the teacher according to the 7-point scale.

Course Plan

(preliminary, subject to change, please refer to course website)

| Week (session) | Content |
|----------------|---|
| 36 (1) | Krugman and Obstfeld (KS hereafter), Chapter 1&2: Introduction to the course and overview of world trade |
| 36 (2) | KS Chapter 3: Ricardian model and Theory of Comparative Advantage |
| 37 (1) | KS Chapter 4: Heckscher-Ohlin model |
| 37 (2) | KS Chapter 5&8: Standard trade model and instruments of trade policy |
| 38 (1) | KS Chapter 9: International trade policy, Part 1 |
| 38 (2) | KS Chapter 10 & 11: International trade policy, Part 2 |
| 39 (1) | KS Chapter 12&13: National income accounting, balance of payments, and introduction to FX market |
| 39 (2) | KS Chapter 14: Money, interest rates and exchange rates |
| 40 (1) | KS Chapter 15&16: Exchange rate in the long run and short run |
| 40 (2) | KS Chapter 17&18: Exchange rate regimes, Part 1 |
| 41 (1) | KS Chapter 17&18: Exchange rate regimes, Part 2 |
| 41 (2) | Global financial crisis |
| 42 | Final Exam (October 22) |
